

Net731 Week 8: Bongani Thengeni

20240038

Task 1: Create Azure Budget Alerts

The goal here is to ensure you aren't surprised by a massive bill at the end of the month.

1. **Navigate:** Sign in to the **Azure Portal**. In the top search bar, type "**Cost Management + Billing**" and select it.
2. **Scope:** Click on **Budgets** in the left-hand menu. Ensure the "Scope" at the top is set to your specific Subscription.
3. **Create:** Click **+ Add**.
 - **Name:** Project-Tech-Budget.
 - **Reset Period:** Set to **Monthly**.
 - **Amount:** Enter **100**.
4. **Alert Conditions:**
 - **Alert 1:** Type: **Actual**, Percent of budget: **80%** (This gives you a \$20 "buffer" to shut things down).
 - **Alert 2:** Type: **Forecasted**, Percent of budget: **100%** (This warns you if your current *trend* will break the bank).
5. **Recipients:** Under "Email recipients," enter your student email.
6. **Evidence:** Before clicking **Create**, stay on the summary page.

Action: Take a screenshot showing the Name, \$100 amount, and the two alert thresholds.

Microsoft Azure

Home > Cost Management + Billing | Billing scopes > Bongani Thengeni | Budgets

Create budget

Budget

* Alert conditions

Type	% of budget	Amount
Actual cost	80	80
Forecasted cost	100	100
Select type	Enter %	-

* Alert recipients (email)

Alert recipients (email)

bthengeni0404@gmail.com

example@email.com

It is recommended to add azure-noreply@microsoft.com to your email allow list to ensure alert mails do not go to your spam folder.

Filters	-
Amount	100.00 USD
Period	Resets monthly
Creation date	5/1/2026
Expiration date	4/30/2028

Budget alerts

Alert conditions	Type	% of budget
	Actual cost	80%
	Forecasted cost	100%

Task 2: Monitor Usage and Adjust Resource Settings

1. **Analyze:** In the Cost Management menu, select **Cost Analysis**.
2. **View:** Change the "View" to **Cost by Service**. This shows you exactly which VM, Database, or Disk is the most expensive.
3. **Investigate:**
 - *Common culprits used* : Premium SSD storage, high-tier SQL databases, or VMs left running 24/7.
4. **The Adjustment:** Choose one resource to optimize.
 - **VMs:** If you have a VM, go to its **Size** setting and downscale it to a "B-series" (burstable) such as the Standard_B1s.
 - **Storage:** Check if you have unattached Managed Disks such as orphaned disks from deleted VMs still cost money.

Action: Take a "Before" screenshot of the Cost Analysis chart. Perform your change such as stopping or resizing.
